

A STORY FROM JOHANSSON TOWN

THE TORN POSTER

SAKURA SHŌTEN. A QUIET MORNING.

ONE FOR YOU...
ONE FOR YOU...
AND ONE FOR YOU!

IN WALKS MR TETSUO. VERY SERIOUS.

THEN HE SAW THE NEW POSTER...

WHY IT WORKS

SO THAT IS
PYTHAGORAS'
THEOREM.

BUT WHY DOES
IT WORK?

TAKE FOUR COPIES OF THE TORN TRIANGLE,
AND PUT THEM INSIDE ONE BIG SQUARE.

LIKE THIS, THE SPACE LEFT OVER IS TWO
SQUARES: ONE ON EACH SHORT SIDE.

NOW SLIDE THE SAME
FOUR TRIANGLES AROUND.

THE SPACE LEFT OVER IS ONE
TILTED SQUARE, ON THE LONG SIDE.

SAME SPACE, SO THE SAME AREA.

SO, FOR ANY RIGHT
ANGLE: SQUARE THE TWO
SIDES, ADD THEM, THEN
TAKE THE SQUARE ROOT.

$$a^2 + b^2 = c^2$$

NOW YOU KNOW.

JOHANSSON · BONUS · MATHS, SIMPLY
