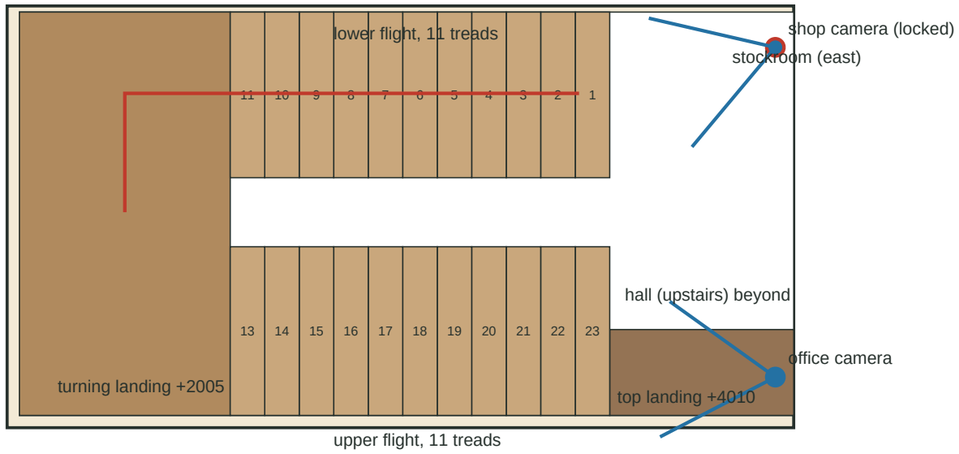
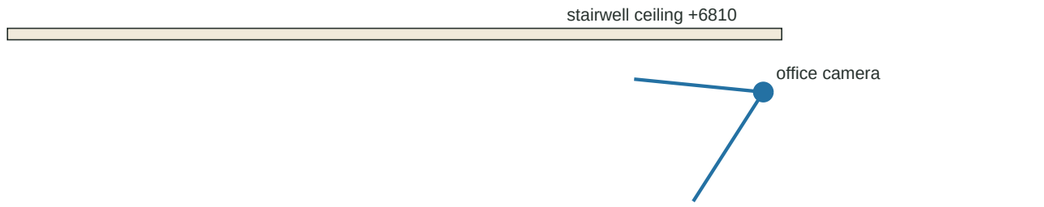
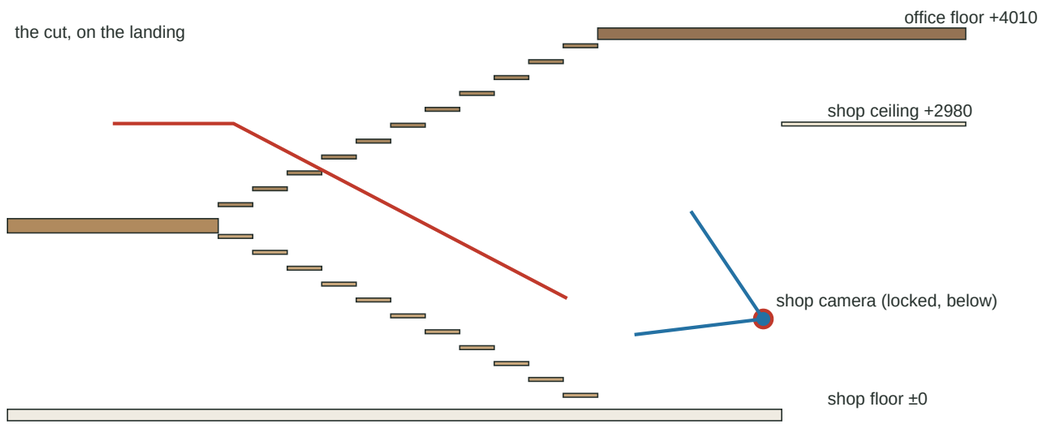
SK-ST-001 The climb is the loading screen: a locked camera, the flight walked, no black



Plan 1:40 (the shop's frame). Numbers: rises above the shop floor. Red: the walk up.





Section looking north 1:40 (heights at 0.62 for the sheet). The walk drawn at chest height, 1 m over the treads.

How it plays (game.js takeSakuraStair):
1. He steps onto the first tread (or Go upstairs): no black, no fade.
2. One camera, locked low in the corner at the stair's foot ("Camera should lock from below we just see him go up"), aimed up the lower flight, turning only a little. He walks up the lower flight away from it and turns on the landing.
3. The office storey loads while he climbs. As he turns out of sight (the walls between the flights hide the upper one from any camera below) the picture cuts (0.18 s) and he is at the stair head upstairs. If it is not ready he waits on the landing, in view.
4. Coming down: a camera locked high over the top landing watches him go down the upper flight to the landing; the cut; he is at the stair's foot in the stockroom.

Built (sakura-stairs.js, buildSakuraStairwell), the same in both storeys:
- 11 + 11 treads on closed carriages to the floor (no open space under a flight);
- the turning landing on a closed block; the top landing on the office floor;
- the well walls carried full height: west, south, north; the stairwell ceiling;
- what each storey cannot otherwise show is closed: in the shop, the hall's floor and walls over the stockroom; in the office, the stockroom floor at the foot.
- The black volumes stay as colliders only (nobody walks the flights).

Checks:
pass 24 rises reach the office floor
pass 2 rises + going within 550..700 mm
pass the landing is the twelfth rise
pass up: round the turning landing
pass down: round the turning landing
pass shop camera locked below, at the stair foot ("Camera should lock from below")
pass office camera inside the stairwell, over the top landing
pass DXF reopens with no audit errors

SK-ST-001 rev B 27 October 2026

Sakura Shoten, Minato - the stair climb between the storeys

Plan and section looking north, 1:40

Virtual-environment drawing, not a construction approval.
